

NETWORK *Notification*

Notice Date: January 15, 2021
To: Georgia Marketplace Providers
From: CareSource
Subject: Eviti Provider Notice
Effective Date: February 15, 2021

Summary

We are pleased to announce that CareSource and NantHealth have partnered to give you access to Eviti Connect: a web-based platform enabling real-time decision support and prior authorization for oncology services.

Impact

Eviti Connect electronically connects CareSource and oncology practices for the authorization of oncology treatment plans in real-time, validating cancer treatment decisions with evidence-based medicine before treatment begins. The automated process reduces the administrative time involved in obtaining and providing authorizations at the drug level and assures appropriate reimbursement at the regimen level, aligning all parties around value-based oncological care.

Importance

****Effective 02/15/21, prior authorization requests related to oncology treatments (i.e., chemotherapy and supporting medications) for CareSource Marketplace members will be initiated through Eviti Connect.****

This change in process will expedite approvals and give you access to Eviti Connect at no cost to you or your practice. Through this platform, you can:

- Access the latest evidence-based guidelines for radiation and chemotherapy
- Customize treatments or select from 3,500+ pre-built regimens and 10,000+ clinical trials
- Obtain authorizations, including automatic approval on many common treatments
- Discuss open authorization requests with Eviti's clinical staff
- Experience improved turnaround time for authorizations, plus free support and training

Eviti Connect aggregates recommendations from national government agencies, reports, and journal publications (including the NCCN Compendium, JCO, JNCI, Lancet, NEJM and JAMA), and is configured to reflect the standards and requirements of CareSource's plan language.

Questions?

To help you in this transition, several training windows will be scheduled in February of 2021 and all staff responsible for oncology authorizations are encouraged to participate.

For more information and training opportunities, look for our next communication, or contact your provider representative.
