Notice Date: July 27, 2020
To: CareSource Providers
From: CareSource
Subject: Risk Adjustment Coding Education

Summary

CareSource reviews provider documentation to ensure the accuracy of diagnosis codes reported. Recent reviews have demonstrated an opportunity to improve the accuracy of ICD-10-CM codes reported for services rendered in an office setting.

Impact

As a result of our reviews, CareSource has created a third reference document related to risk adjustment coding based on diagnoses codes for cancer. Providers can access the [Cancer Education Reference](#) to learn more about appropriate risk adjustment coding.

Two other education references are available for: Myocardial Infarction and Stroke when you log on to the [Provider Portal](#).

Importance

Complete, specific and accurate coding helps to ensure that CareSource is able to connect members with appropriate disease management and case management resources.
