

## Together we can help save a member's life

We recognize the important role you as our health partner play in our members' lives and are committed to working with you and offering resources to help integrate suicide prevention strategies into your practice.

We encourage you to complete suicide screenings at all visits. We ask that you assess our members using screenings and assessments such as those identified below:

- **96127** - Brief emotional/behavioral assessment (e.g., depression inventory, attention-deficit/hyperactivity disorder [ADHD] scale), with scoring and documentation, per standardized instrument
- **96110** - Developmental screening (e.g., developmental milestone survey, speech and language delay screen), with scoring and documentation, per standardized instrument

When you complete an assessment, we request that you also add the CPT category II code 3085F suicide risk assessed with the appropriate diagnosis codes:

Code	Diagnosis
T14.91	Suicide attempt
X71-X83	Intentional self-harm
R45.851	Suicidal ideation
X60-X69	Poisoning self-harm/suicide
Z91.5	Personal history of self-harm /suicide attempt

CareSource engages identified at-risk members into one to one care management. You can also refer a member for care management by visiting our provider portal at [CareSource.com](https://www.caresource.com)

We encourage providers to provide people who are experiencing suicidal ideation with safety planning and lethal means restriction. We also encourage you to then share this with a patient's other treating physicians. Communication between Behavioral Health and Primary Care is key in keeping your patient and our member safe.

Please visit [CareSource.com/suicide-prevention-tool-kit](https://www.caresource.com/suicide-prevention-tool-kit) for more information about screenings, assessments, safety interventions and therapies.

Thank you for playing a critical role in preventing suicide
