

Member On-Hold Message -- Antibiotics

We want you to keep your family healthy by knowing about the proper use of antibiotics. Antibiotics don't help the common cold or flu. If people take antibiotics when they don't need them, it can make these drugs less helpful in the future. Talk with your doctor to get the right treatment during this cold and flu season. You can also call CareSource24[®], your 24-hour Nurse Advice Line at 1-844-206-5947 (TTY: 1-800-743-3333 or 711) for more information.
