

Clinical Practice Registry (CPR) Definitions Recent Updates

The Clinical Practice Registry (CPR) is an online tool that emphasizes preventive care by identifying and prioritizing health care services. The tool is available for all health care providers with CareSource (CS) covered patients, and can be found on the **Provider Portal**. CPR tutorial instructional video: <https://vimeo.com/284176954>.

The CPR Definitions document helps if you have questions about the registry fields or content.

Updated Measures	Criteria for Triggering Alerts
Immunizations for Children –	Identify patients currently effective between the ages of 1 year and 2 years and identify whether or not they have received all recommended immunizations. Green – Patient had all recommended immunizations. Yellow – Patient had almost all recommended immunizations, but needs the last or only recommended immunization(s) for any or all of the recommended immunizations. Red – Patient needs more than one of any or all of the recommended immunizations.
Immunizations for Adolescents –	Identify patients currently effective between the ages of 12 years and 13 years and identify whether or not they have received all recommended immunizations. Green – Patient had all recommended immunizations. Yellow – Patient had almost all recommended immunizations, but needs the last or only recommended immunization(s) for any or all of the recommended immunizations. Red – Patient needs more than one of any or all of the recommended immunizations.
Pneumococcal Vaccines of Older Adults –	Identify patients currently effective older than 64 years, 10 months and identify whether or not they have received all recommended pneumococcal immunizations. Green – Patient had all recommended immunizations. Yellow – Patient needs the last one of the recommended immunizations. Red – Patient needs more than one of the recommended immunizations.
Statin Therapy for Members with Cardiovascular Disease –	Identify patients currently effective between the ages of 39 years, 10 months and 75 for females or between the ages of 20 years, 10 months and 75 for males who have been identified with clinical atherosclerotic cardiovascular disease (ASCVD) AND do not have diabetes, and identify whether or not that they have received a statin medication during timeframe evaluated for the following: Green – Patient had at least one prescription for a statin medication during the most recent 8 months. Yellow – Patient had at least one prescription for a statin medication but the most recent statin medication prescription occurred 9-15 months ago. Red – Patient has not had any prescriptions for a statin medication or the most recent statin medication prescription occurred more than 15 months ago.
Statin Therapy for Members with Diabetes –	Identify patients currently effective between the ages of 39 years, 10 months and 75 who have been identified with diabetes AND do not have clinical atherosclerotic cardiovascular disease (ASCVD), and identify whether or not that they have received a statin medication during timeframe evaluated for the following: Green – Patient had at least one prescription for a statin medication during the most recent 8 months. Yellow – Patient had at least one prescription for a statin medication but the most recent statin medication prescription occurred 9-15 months ago. Red – Patient has not had any prescriptions for a statin medication or the most recent statin medication prescription occurred more than 15 months ago.

***HEDIS End of Year** – For each measure, code to identify if the patient is expected to be reported in HEDIS at the end of the current year.

CareSource strives to make it easy for you to work with us, whether online or over the phone.

- ✓ Visit our **Provider Portal** to check claims, prior authorization status, member eligibility, coordination of benefits and more, day or night
