clinical guidelines, nationally recognized utilization and technology assessment guidelines, other medical management industry standards, and published MCO clinical policy guidelines. Medically necessary services include, but are not limited to, those health care services or supplies that are proper and necessary for the diagnosis or treatment of disease, illness, or injury and without which the patient can be expected to suffer prolonged, increased or new morbidity, impairment of function, dysfunction of a body organ or part, or significant pain and discomfort. These services meet the standards of good medical practice in the local area, are the lowest cost alternative, and are not provided mainly for the convenience of the member or provider. Medically necessary services also include those services defined in any Evidence of Coverage documents, Medical Policy Statements, Provider Manuals, Member Handbooks, and/or other policies and procedures.

Medical Policy Statements prepared by CareSource and its affiliates do not ensure an authorization or payment of services. Please refer to the plan contract (often referred to as the Evidence of Coverage) for the service(s) referenced in the Medical Policy Statement. If there is a conflict between the Medical Policy Statement and the plan contract (i.e., Evidence of Coverage), then the plan contract (i.e., Evidence of Coverage) will be the controlling document used to make the determination.

According to the rules of Mental Health Parity Addiction Equity Act (MHPAEA), coverage for the diagnosis and treatment of a behavioral health disorder will not be subject to any limitations that are less favorable than the limitations that apply to medical conditions as covered under this policy.

Myoelectric Lower Extremity Prosthetic Technology

B. Background

The policy addressees the computerized limb prosthesis that is a nonstandard, external prosthetic device incorporating a microprocessor for movement control. These devices are equipped with a sensor that detects when the knee is in full extension and adjusts the swing phase automatically, permitting a more natural walking pattern of varying speeds.

- C. Definitions
 - **Myoelectric Lower Extremity Prosthetic Technology** Addition to lower extremity prosthesis, endoskeletal knee-shin system, microprocessor control feature, swing phase only, includes electronic sensor(s), any type.
 - **Classification Level** Rehabilitation potential as described by Centers for Medicare & Medicaid Services:

Level 0: Does not have the ability or potential to ambulate or transfer safely with or without assistance and a prosthesis does not enhance their quality of life or mobility	 a. The individual does not have sufficient cognitive ability to safely use a prosthesis with or without assistance. b. The individual requires assistance from equipment or caregiver in order to transfer and use of a prosthesis does not improve mobility or independence with transfers. c. The individual is wheelchair dependent for mobility and use of a prosthesis does not improve transfer abilities. d. The individual is bedridden and has no need or capacity to ambulate or transfer.
Level 1: Has the ability or potential to use a prosthesis for transfers or ambulation on level surfaces at fixed cadence, typical of the limited and unlimited household ambulator.	 a. The individual has sufficient cognitive ability to safely use a prosthesis with or without an assistive device and/or the assistance/supervision of one person. b. The individual is capable of safe but limited ambulation within the home with or without an assistive device and/or with or without the assistance/supervision of one person. c. The individual requires the use of a wheelchair for most activities outside of their residence. d. The individual is not capable of most of the functional activities designated in Level 2. a. The individual can, with or without an assistive device (which may include one or two handrails) and/or with or without the assistance/supervision of one person.

such as curbs, stairs or i. Perform the Level 1 tasks designated	
uneven surfaces. This above	
level is typical of the ii. Ambulate on a flat, smooth surface	
iii. Negotiate a curb	
ambulator. iv. Access public or private transportation	ו
v. Negotiate 1-2 stairs	
vi. Negotiate a ramp built to ADA	
specifications.	
b. The individual may require a wheelchair	ior
distances that are beyond the perimeters	of
the yard/driveway, apartment building, et	
c. The individual is only able to increase his	
generally observed speed of walking for s	
distances or with great effort.	
d. The individual is generally not capable of	
accomplishing most of the tasks at Level	3 (or
does so infrequently with great effort).	
does so innequently with great errorty.	
Level 3: Has the ability or a. With or without an assistive device (which	h
potential for ambulation may include one or two hand rails), the	
with variable cadence, individual is independently capable (i.e.	
typical of the community requires no personal assistance or	
ambulator who has the supervision) of performing the Level 2 tas	ks
ability to transverse most above and can:	NO
environmental barriers i. Walk on terrain that varies in texture	and
	anu
and may have vocational, level (e.g., grass, gravel, uneven	
therapeutic, or exerciseconcrete)activity that demandsii.Negotiate 3-7 consecutive stairs	
prosthetic utilization iii. Walk up/down ramps built to ADA	
beyond simple specifications	
iv. Open and close doors	
v. Ambulate through a crowded area (e	
grocery store, big box store, restaura	
vi. Cross a controlled intersection within	
his/her community within the time lim	it
provided (varies by location)	
vii. Access public or private transportati	
viii. Perform dual ambulation tasks (e.g.	
an item or meaningfully converse wh	ille
ambulating)	
b. The individual does not perform the activi	ies of
Level 4.	
Level 4: Has the ability or With or without an assistive device (which n	•
potential for prosthetic include one or two hand rails), this individua	
ambulation that exceeds independently capable (i.e. requires no pers	
the basic ambulation assistance or supervision) of performing high	Jh
skills, exhibiting high impact domestic, vocational or recreational	
impact, stress or energy activities such as:	
levels typical of the a. Running	
prosthetic demands of the b. Repetitive stair climbing	

child, active adult, or	c. Climbing of steep hills
athlete.	d. Being a caregiver for another individual
	e. Home maintenance (e.g. repairs, cleaning)

NOTE: Consideration is given to bilateral amputees who often cannot be strictly bound by the Classification Levels.

D. Policy

- I. CareSource considers Myoelectric Lower Limb Prosthetic Technology medically necessary when the following criteria are met:
 - A. Is 18 years of age or older.
 - B. Has a lower extremity prosthesis(es).
 - C. Documentation submitted supports medical necessity and includes the following:
 - 1. A written order/prescription from a treating practitioner for the additional technology.
 - 2. Sufficient documentation of the rehabilitation potential including, but not limited to:
 - a. Clear documentation supporting the expected potential Classification Level that is K3 or above.
 - 3. Member:
 - a. Is emotionally ready;
 - b. Is able and willing to participate in training;
 - c. Is able and willing to care for the technology;
 - d. Is physically able to use the equipment; and
 - e. Has adequate cardiovascular and pulmonary reserve for ambulation at faster than normal walking speed.

NOTE: Documentation for Durable Medical Equipment, Prosthetics, Orthotics, and Supplies is followed
