

## PHARMACY POLICY STATEMENT

### Georgia Medicaid

|   |  |
|---|--|
| DRUG NAME   | Strensiq (asfotase alfa)   |
| BILLING CODE  | Must use valid NDC   |
| BENEFIT TYPE  | Pharmacy   |
| SITE OF SERVICE ALLOWED                                     | Home   |
| COVERAGE REQUIREMENTS                                       | Prior Authorization Required (Non-Preferred Product)<br>QUANTITY LIMIT— up to 9 mg/kg per week |
| LIST OF DIAGNOSES CONSIDERED <b>NOT</b> MEDICALLY NECESSARY | <a href="#">Click Here</a>   |

Strensiq (asfotase alfa) is a **non-preferred** product and will only be considered for coverage under the **pharmacy** benefit when the following criteria are met:

Members must be clinically diagnosed with one of the following disease states and meet their individual criteria as stated.

### HYPOPHOSPHATASIA (HPP)

For **initial** authorization:

1. Member has diagnosis of hypophosphatasia (HPP) with perinatal/infantile- OR juvenile-onset; AND
2. Member was  $\leq 18$  years of age at onset of HPP; AND
3. Chart notes submitted with member's clinical evidence of HPP with onset prior to 18 years of age (e.g., biochemical, medical history, radiographic evidence) **and** ANY of the following:
  - a) Rickets characteristically presents radiographically with metaphyseal widening and fraying, bowing of long bones, and generalized hypomineralization;
  - b) Pain that does not respond to initial conservative treatments such as physical therapy, rest, NSAIDs, or acetaminophen;
  - c) Poor growth that impairs function that is not caused by another etiology; AND
4. Member has documented reduced activity of unfractionated serum alkaline phosphatase (ALP) **and** presence of either one or two pathogenic variants in ALPL gene; AND
5. Medication must be prescribed by endocrinologist or other specialist in the area of the member's disease.
6. **Dosage allowed:** Perinatal/Infantile-Onset HPP: 2 mg/kg administered SQ three times per week, or 1 mg/kg administered six times per week. Injection site reactions may limit the tolerability of the six times per week regimen. The dose may be increased to 3 mg/kg three times per week for insufficient efficacy (e.g., no improvement in respiratory status, growth, or radiographic findings). Juvenile-Onset HPP: 2 mg/kg administered SQ three times per week, or 1 mg/kg administered six times per week. Injection site reactions may limit the tolerability of the six times per week regimen.

***If member meets all the requirements listed above, the medication will be approved for 6 months.***

For **reauthorization**:

1. Chart notes have been provided that show the member has shown improvement of signs and symptoms of disease.

***If member meets all the reauthorization requirements above, the medication will be approved for an additional 12 months.***

**CareSource considers Strensiq (asfotase alfa) not medically necessary for the treatment of the following disease states based on a lack of robust clinical controlled trials showing superior efficacy compared to currently available treatments:**

- Pseudohypophosphatasia

| DATE       | ACTION/DESCRIPTION               |
