

MEDICAL POLICY STATEMENT OHIO MEDICAID				
Policy Name			Policy Number	Date Effective
Genetic Testing,	Genetic Testing, Genetic Screening and Genetic Counseling MM-0003 11/01/2019			11/01/2019
Policy Type				
MEDICAL	Administrative	Pharmacy	,	Reimbursement

Medical Policy Statement prepared by CSMG Co. and its affiliates (including CareSource) are derived from literature based on and supported by clinical guidelines, nationally recognized utilization and technology assessment guidelines, other medical management industry standards, and published MCO clinical policy guidelines. Medically necessary services include, but are not limited to, those health care services or supplies that are proper and necessary for the diagnosis or treatment of disease, illness, or injury and without which the patient can be expected to suffer prolonged, increased, or new morbidity, impairment of function, dysfunction of a body organ or part, or significant pain and discomfort. These services meet the standards of good medical practice in the local area, are the lowest cost alternative, and are not provided mainly for the convenience of the member or provider. Medically necessary services also include those services defined in any Evidence of Coverage documents, Medical Policy Statements, Provider Manuals, Member Handbooks, and/or other policies and procedures.

Medical Policy Statements prepared by CSMG Co. and its affiliates (including CareSource) do not ensure an authorization or payment of services. Please refer to the plan contract (often referred to as the Evidence of Coverage) for the service(s) referenced in the Medical Policy Statement. If there is a conflict between the Medical Policy Statement and the plan contract (i.e., Evidence of Coverage) will be the controlling document used to make the determination.

Genetic Testing, Genetic Screening and Genetic Counseling

B. Background

Recent advancements in our understanding of the human genome have contributed to the rapid expansion of identified genetic mutations. Supported by new technologies and commercially available measurement tools, there are now ever-expanding numbers of genetic assays available for genetic screening and genetic testing. In some clinical situations, the results from testing can be of significant assistance in diagnosis, prevention, therapeutic treatment, or monitoring of conditions. This emerging field is divided into three categories - Genetic Counseling, Genetic Screening, and Genetic Testing.

GENETIC COUNSELING:

Genetic counseling is the process of education and recommendations provided by independent genetic professionals discerned from familial and medical histories to those at risk or currently having a genetic disease, to allow them to make informed decisions as well as gaining understanding of the effects of the disease. Genetic counseling is an integral component of the creation of a genetic testing environment that is informative and supportive to patients, both before and after they undergo testing. As outlined in the current edition of the MCG Care Guidelines, genetic counseling plays an essential role in genetic testing and is required as part of its pre-certification.

A genetic counseling consultation prior to actual testing involves evaluation of an individual or family for one or more of the following:

- diagnosing, confirming, or eliminating the existence of an inheritable genetic condition as well as assessing any risks versus benefits
- identifying medical management issues including modes of transmission, patterns of inheritance, treatment of disorders, evaluation, calculation, and communication of genetic risks, and potential of inheritance
- prospective evaluation of available genetic tests and education about alternatives
- explanation of complex clinical information to ensure informed decisions as well as promoting understanding of potential ethical, legal, and psychosocial implications

A genetic counseling consultation subsequent to genetic testing involves one or more of the following:

- ensuring appropriate interpretation and communication of testing results
- counseling to assist in any necessary adaptation to medical risks or conditions
- coordinating any necessary provider care and support of patient and family

GENETIC SCREENING:

Genetic screening is the process used to uncover genetic disorders or the potential for transmission of genetic disorders in specific populations determined to be at risk. Genetic screening uses a set of diagnostic tests that are not as rigid as those employed

MM-0003

Effective Date: 11/01/2019

in genetic testing. Genetic screening is a population-based method intending to find whom in the population is a carrier and/or has risk of getting a specific disease. Genetic screening uses simple medical diagnostic tests. In addition, as opposed to actual genetic testing, with genetic screening, individuals are asymptomatic. Generally, the next step following screening, if warranted, is actual diagnostic testing.

GENETIC TESTING:

Genetic testing, for clinical purposes, is analysis of human DNA, RNA, chromosomes, proteins, or certain metabolites in order to detect alterations or disease-related genotypes, mutations, phenotypes or karyotypes related to a heritable or acquired disorder. There are currently more than 6,000 genetic disorders identified and nearly 2,000 genetic tests currently in use today that are performed through a variety of methods including cytogenetic testing (examination of chromosomes and their abnormalities), biochemical testing (examination of proteins rather than genes), and molecular (direct examination of DNA or RNA).

C. Definitions

- Analytic Validity: the result of how well a genetic test measures the intended properties or characteristics being tested
- Clinical Validity: how well the genetic variant being analyzed is related to the presence, absence, or risk of a specific disease
- Clinical Utility: whether the test can provide information regarding diagnosis, treatment, management, or prevention of a disease or condition that will be helpful to a consumer
- Clinical Laboratory Improvement Amendments (CLIA): ffederal regulatory standards from 1988 applying to all clinical laboratory testing performed on humans in the US for the purpose of providing information for diagnosis, prevention or treatment of disease (excludes clinical trials and basic research)
- College of American Pathologists (CAP): an organization of certified pathologists providing accreditation and quality assurance to clinical laboratories
- Diagnostic Testing: the process of examination of specimens and results reported to providers or patients for the purpose of confirmation of diagnosis and identification of causes of a disease, as well as influencing an individual's choice about healthcare, lifestyle and disease or condition management
- Genetic Mutation: an alteration of a chromosome, gene, or protein from its natural state
- Genetic Panel Testing: an evaluation of many genes simultaneously and have been developed for numerous indications, including hereditary cancer risk assessment, pharmacogenetics, and diagnosis of congenital disorders. Many panel tests include genes that do not have demonstrated clinical utility for their testing
- National Comprehensive Cancer Network (NCCN): a not-for-profit alliance of 28 leading cancer centers focused on patient care, research, and education, whose mission is for the improvement of the quality, effectiveness, and efficiency of cancer care

• Prenatal Testing: testing prior to birth, to identify changes in genes or chromosomes in embryos or fetuses to identify any potential genetic or chromosomal disorders

 Prenatal Screening: a non-invasive process of analysis using maternal blood to identify the risk of a woman carrying a fetus with a chromosome abnormality or birth defect

D. Policy

- I. Prior Authorization
 - A. Prior Authorization for genetic testing IS required
 - B. Prior Authorization for genetic counseling is not required
- II. Genetic Testing: CareSource will review for medical necessity and approve genetic testing based on all of the criteria below found under ONE of the following situations:
 - A. Published MCG policy with endorsed inclusion criteria meeting all of the following:
 - 1. Documentation of an assessment based on the relevant MCG Guideline AND
 - The quality, safety, statistical validity, and clinical validity is scientifically supported in medical literature as endorsed by inclusion criteria of the relevant MCG Guideline AND
 - 3. Genetic counseling has been performed, as indicated by documentation supporting ALL of the following items listed below:
 - a. Counseling is provided by a healthcare professional (as defined below) with education and training in genetic issues relevant to the genetic tests under consideration, AND
 - b. Counselor is free of commercial bias and discloses all (potential and real) financial and intellectual conflicts of interest, AND
 - c. Process involves individual or family and is comprised of ALL of the following:
 - 01. Calculation and communication of genetic risks after obtaining 3generation family history AND
 - 02. Discussion of natural history of condition in question, including role of heredity AND
 - 03. Discussion of possible impacts of testing (e.g., psychological, social, limitations of nondiscrimination statutes) AND
 - 04. Discussion of possible test outcomes (i.e., positive, negative, variant of uncertain significance) AND
 - 05. Explanation of potential benefits, risks, and limitations of testing AND
 - 06. Explanation of purpose of evaluation (e.g., to confirm, diagnose, or exclude genetic condition) AND
 - 07. Identification of medical management issues, including available prevention, surveillance, and treatment options and their implications AND
 - 08. Written documentation that the patient has provided informed consent to the testing as evidenced by a statement detailing how the test results will affect the patient's medical management
 - B. Published MCG policy where the Current Role Remains Uncertain:
 - 1. In the case of these policies, based on existing evidence, where currently there are no clinical indications for this technology and insufficient evidence exists to support their use in guiding clinical decision making, genetic testing

Genetic Testing, Genetic Screening, and Genetic Counseling OHIO MEDICAID

MM-0003

Effective Date: 11/01/2019

under these circumstances is approved as a covered medically necessary health benefit when ALL of the following criteria are met:

- Documentation of assessment of patient risk factors and/or symptoms related to the particular genetic disease or disorder being tested (including relevant family history) AND
- Genetic counseling has been performed in conformance with MCG guidelines AND
- c. Documentation that the patient has provided informed consent to the testing as evidenced by a statement detailing how the test results will affect the patient's medical management, AND
- d. Analytic validity, clinical validity, and clinical utility of the test or panel of tests, can be established through evidence based and literature supported guidelines by nationally recognized technology organizations such as the National Comprehensive Cancer Network (NCCN)
- C. No Published MCG Policy:
 - Where the most current version of the MCG Care Guidelines contains no published MCG policy for the genetic test and/or genetic panels, testing may be approved only when ALL of the following criteria are met:
 - Documentation of assessment of patient risk factors and/or symptoms related to the particular genetic disease or disorder being tested (including relevant family history) AND
 - b. Genetic counseling has been performed in conformance with MCG guidelines AND
 - c. Documentation that the patient has provided informed consent to the testing as evidenced by a statement detailing how the test results will affect the patient's medical management, AND
 - d. Analytic validity, clinical validity, and clinical utility of the test or panel
 of tests, can be established through evidence based and literature
 supported guidelines by nationally recognized technology
 organizations such as the National Comprehensive Cancer Network
 (NCCN)

NOTE: The healthcare professional providing counseling must be one of the following: an independent board-certified or board-eligible medical geneticist, a board-certified MD medical geneticist, or a genetic nurse credentialed as either a Genetic Clinical Nurse (GCN) or an Advanced Practice Nurse in Genetics (APGN) and not employed by a commercial genetic testing laboratory. Qualified health professionals are not excluded if employed by or contracted with a laboratory part of an integrated health system that routinely delivers health care services beyond simply laboratory tests themselves. The clinical testing laboratory must be accredited by CLIA or CAP, the State and/or other applicable accrediting agencies.

III. Once Per Lifetime Testing

A. Absent specific evidence regarding advances in the body of knowledge of mutation characteristics for a particular disease or disorder, a genetic test will be covered only once per lifetime of a member.

Table A – Current as of June 26, 2019

- 15. MCG Care Guidelines: Ambulatory Care Guidelines for Genetic Medicine (23rd Ed., 2019).

This guideline contains custom content that has been modified from the standard care guidelines and has not been reviewed or approved by MCG Health, LLC.

Note: Effective 06/2019 CareSource will utilize the current edition of the MCG Care Guidelines' (Ambulatory Care: Genetic Medicine section) criteria when reviewing prior authorization requests for coverage of genetic test(s). This policy statement clarifies and supplements the individual guidelines in this set.

The Medical Policy Statement detailed above has received due consideration as defined in the Medical Policy Statement Policy and is approved.
