

PHARMACY POLICY STATEMENT	
Ohio Medicaid	
DRUG NAME	Omnitrope (somatropin) <b>cartridge</b> 5 mg/1.5 mL and 10 mg/1.5 mL Omnitrope (somatropin) for injection 5.8 mg/ <b>vial</b>
BILLING CODE	Must use valid NDC code
BENEFIT TYPE	Pharmacy
SITE OF SERVICE ALLOWED	Home
COVERAGE REQUIREMENTS	Prior Authorization Required QUANTITY LIMIT— per diagnosis, see <b>Dosage allowed</b>
LIST OF DIAGNOSES CONSIDERED <b>NOT</b> MEDICALLY NECESSARY	Click Here

Omnitrope (somatropin) cartridge (5 mg/1.5 mL and 10 mg/1.5 mL) is a **non-preferred** product and Omnitrope (somatropin) 5.8 mg/vial is a **preferred** product and both will only be considered for coverage under the **pharmacy** benefit when the following criteria are met:

Members must be clinically diagnosed with one of the following disease states and meet their individual criteria as stated.

#### Adult GROWTH HORMONE DEFICIENCY (GHD) - Adult or Childhood Onset

For **initial** authorization:

- 1. If request is for <u>Omnitrope cartridge</u> member must have a documented 90-day trial and failure of Omnitrope 5.8 mg vial; AND
- 2. Member is 18 years of age or older; AND
- 3. Medication must be prescribed by an endocrinologist; AND
- 4. Member must have a diagnosis of GHD confirmed by **one** of the following:
  - a) Chart notes documentation of acquired structural abnormality (*see Appendix*) of the hypothalamus or pituitary and ≥ 3 documented pituitary hormone deficiencies (*see Appendix*) with included lab results and reference ranges;
  - b) Documented childhood-onset of GHD with a documented congenital abnormality (*see Appendix*) of the hypothalamus or pituitary;
  - c) Two pre-treatment peak serum growth hormone (GH) concentration < 5 ng/mL by stimulation testing with included lab results and reference ranges, unless Macrilen (prior authorization required) was used, in which case a GH level must be < 2.8 ng/ml.</p>
- 5. **Dosage allowed:** Weight based dosing: 0.04-0.08 mg/kg/week. Non-weight based dosing: starting dose 0.2 mg/day (0.15-0.30 mg/day) and increased every 1-2 months in increments of 0.1-0.2 mg/day, doses vary considerably.

#### *If member meets all the requirements listed above, the medication will be approved for 12 months.* For **reauthorization**:

- 1. Member must be in compliance with all of the initial criteria; AND
- 2. Member's current IGF-1 level not elevated for age/gender (does not apply to members w/ structural abnormality of hypothalamus/pituitary and at least pituitary hormone deficiencies or childhood onset GHD and congenital abnormality of hypothalamus/pituitary).

## CareSource

If member meets all the reauthorization requirements above, the medication will be approved for an additional 12 months.

#### Pediatric GROWTH HORMONE DEFICIENCY (GHD)

For *initial* authorization:

- 1. If request is for <u>Omnitrope cartridge</u> member must have a documented 90-day trial and failure of Omnitrope 5.8 mg vial; AND
- 2. Member is 17 years old or younger; AND
- 3. Medication must be prescribed by an endocrinologist; AND
- 4. Member must have a diagnosis of GHD confirmed by **one** of the following:
  - a) Neonate or diagnosed with GHD as neonate indicated by ALL of the following:
    - i) Chart notes, labs, and documentation must be included to support the diagnosis (e.g, hypoglycemia with random GH level ≤ 5 ng/mL, evidence of multiple pituitary hormone deficiency (see Appendix), MRI results);
    - ii) Pituitary abnormality (secondary to congenital anomaly (*see Appendix*), pituitary tumor, or irradiation);
    - iii) A known deficiency of at least one other pituitary hormone (see Appendix);
  - b) Two pre-treatment peak serum growth hormone concentration < 10 ng/mL by stimulation testing (*must include lab results with reference ranges*);
  - c) A documented pituitary or CNS disorder and a pre-treatment IGF-1 level > 2 Standard Deviations (SD) below the mean (*must include chart notes and documentation to confirm diagnosis and lab results with reference ranges*); AND
- 5. Member must have a pretreatment height (*must include growth charts*) of > 2 SD below the mean for age and gender; AND
- If member is age 12 or older, radiographic evidence the member's epiphyses are open (*x-ray results must be included*). Comparison of bone age to chronological age should be documented as abnormal by > 2 SD below the mean for chronological age.
- 7. Dosage allowed: 0.16-0.24 mg/kg/week.

#### *If member meets all the requirements listed above, the medication will be approved for 12 months.* For **reauthorization**:

- 1. Member must be in compliance with all of the initial criteria; AND
- If member is age 12 or older, radiographic evidence the member's epiphyses are open (*x-ray results must be included*). Comparison of bone age to chronological age should be documented as abnormal by > 2 SD below the mean for chronological age; AND
- Member has a growth rate > 2.5 cm/year unless there is a documented reason for lack of efficacy (on treatment < 1 year, off treatment for a reason for a period of time, nearing final adult height, late stages of puberty).

## *If member meets all the reauthorization requirements above, the medication will be approved for an additional 12 months.*

#### PRADER-WILLI SYNDROME

For *initial* authorization:

- 1. If request is for <u>Omnitrope cartridge</u> member must have a documented 90-day trial and failure of Omnitrope 5.8 mg vial; AND
- 2. Member is 17 years of age or younger; AND
- 3. Medication must be prescribed by an endocrinologist; AND
- 4. Member must have a diagnosis of Prader-Willi Syndrome confirmed by genetic analyses (*must include documentation*); AND
- 5. Member's pre-treatment height is > 2 SD below the mean and 1 year height velocity is > 1 SD below the mean for age (*must include growth charts and documentation*); AND

- If member is age 12 or older, radiographic evidence the member's epiphyses are open (*x-ray results must be included*). Comparison of bone age to chronological age should be documented as abnormal by > 2 SD below the mean for chronological age.
- 7. Dosage allowed: 0.24 mg/kg/week.

#### *If member meets all the requirements listed above, the medication will be approved for 12 months.* For **reauthorization**:

- 1. Member must be in compliance with all of the initial criteria; AND
- If member is age 12 or older, radiographic evidence the member's epiphyses are open (*x-ray results must be included*). Comparison of bone age to chronological age should be documented as abnormal by > 2 SD below the mean for chronological age; AND
- Member has a growth rate > 2.5 cm/year unless there is a documented reason for lack of efficacy (on treatment < 1 year, off treatment for a reason for a period of time, nearing final adult height, late stages of puberty).

### *If member meets all the reauthorization requirements above, the medication will be approved for an additional 12 months.*

#### SMALL for GESTATIONAL AGE (SGA)

For *initial* authorization:

- 1. If request is for <u>Omnitrope cartridge</u> member must have a documented 90-day trial and failure of Omnitrope 5.8 mg vial; AND
- 2. Member is 2 years of age or older prior to initiating treatment; AND
- 3. Medication must be prescribed by an endocrinologist; AND
- 4. Member must have a diagnosis of small for gestational age (SGA) and failed to catch up growth by 2 years of age; AND
- 5. Member's birth weight and/or length are > 2 SD below the mean for gestational age (*must include growth charts and documentation*); AND
- 6. Member's height remains > 2 SD below population for age and gender (*must include growth charts and documentation*); AND
- If member is age 12 or older, radiographic evidence the member's epiphyses are open (*x-ray results must be included*). Comparison of bone age to chronological age should be documented as abnormal by > 2 SD below the mean for chronological age.
- 8. **Dosage allowed:** Up to 0.48 mg/kg/week.

#### *If member meets all the requirements listed above, the medication will be approved for 12 months.* For **reauthorization**:

- 1. Member must be in compliance with all of the initial criteria; AND
- If member is age 12 or older, radiographic evidence the member's epiphyses are open (*x-ray results must be included*). Comparison of bone age to chronological age should be documented as abnormal by > 2 SD below the mean for chronological age; AND
- Member has a growth rate > 2.5 cm/year unless there is a documented reason for lack of efficacy (on treatment < 1 year, off treatment for a reason for a period of time, nearing final adult height, late stages of puberty).

## *If member meets all the reauthorization requirements above, the medication will be approved for an additional 12 months.*

#### TURNER SYNDROME

For initial authorization:

- 1. If request is for <u>Omnitrope cartridge</u> member must have a documented 90-day trial and failure of Omnitrope 5.8 mg vial; AND
- 2. Member is female age 2 to 17 years; AND

- 3. Medication must be prescribed by an endocrinologist; AND
- 4. Member must have a diagnosis of Turner Syndrome confirmed by genetic analyses (*must include documentation*); AND
- 5. Member's pre-treatment height is > 2 SD below the mean and 1 year height velocity is > 1 SD below the mean for age (*must include growth charts and documentation*); AND
- If member is age 12 or older, radiographic evidence the member's epiphyses are open (*x-ray results must be included*). Comparison of bone age to chronological age should be documented as abnormal by > 2 SD below the mean for chronological age.
- 7. Dosage allowed: 0.33 mg/kg/week.

#### *If member meets all the requirements listed above, the medication will be approved for 12 months.* For **reauthorization**:

- 1. Member must be in compliance with all of the initial criteria; AND
- If member is age 12 or older, radiographic evidence the member's epiphyses are open (*x-ray results must be included*). Comparison of bone age to chronological age should be documented as abnormal by > 2 SD below the mean for chronological age; AND
- Member has a growth rate > 2.5 cm/year unless there is a documented reason for lack of efficacy (on treatment < 1 year, off treatment for a reason for a period of time, nearing final adult height, late stages of puberty).

## *If member meets all the reauthorization requirements above, the medication will be approved for an additional 12 months.*

# CareSource considers Omnitrope (somatropin) not medically necessary for the treatment of the following disease states based on a lack of robust clinical controlled trials showing superior efficacy compared to currently available treatments:

- Constitutional growth delay
- Corticosteroid-induced growth failure
- Cystic fibrosis
- Idiopathic, or non-growth hormone dependent, short stature
- Juvenile idiopathic, or chronic, arthritis
- Noonan Syndrome
- Obesity
- Partial growth hormone deficiency
- Pediatric growth failure due to chronic kidney disease
- SHOX deficiency
- Wound healing in burns patients

DATE	ACTION/DESCRIPTION	
10/25/2018	New policy for Omnitrope created.

- 1) Acquired structural abnormalities
  - CNS tumor or neoplasm (craniopharyngioma, glioma, pituitary adenoma, etc.)
  - Cysts (Rathke cleft cyst or arachnoid cleft cyst)
  - Surgery
  - Radiation
  - Chemotherapy
  - CNS infection
  - CNS infarction (e.g., Sheehan's syndrome)
  - Inflammatory lesions (e.g., autoimmune hypohysitis)
  - Infiltrative lesions (e.g., sarcoidosis, histiocytosis)
  - Head trauma or traumatic brain injury
  - Aneurysmal subarachnoid hemorrhage
  - Panhypopituitarism
- 2) Congenital abnormalities
  - Known genetic mutations in growth-hormone releasing hormone (GHRH) receptor, GH gene, GH receptor or pituitary transcription factors
  - Optic nerve hypoplasia/septo-optic dysplasia
  - Empty sella syndrome
  - Ectopic posterior pituitary
  - Pituitary aplasia/hypoplasia
  - Pituitary stalk defect
  - Anencephaly or prosencephaly
  - Other mid-line defects
  - Vascular malformations
- 3) Pituitary hormones, other than growth hormone (GH)
  - Adrenocorticotropic hormone (ACTH)
  - Antidiuretic hormone (ADH)
  - Follicle stimulating hormone (FSH)
  - Luteinizing hormone (LH)
  - Oxytocin
  - Prolactin
  - Thyroid stimulating hormone (TSH)
