

Re: Summary of Formulary Changes Effective April 1, 2026

Dear CareSource Marketplace Member,

Your Formulary is an important part of your Prescription Drug Benefit. It shows what drugs may be covered for you, what limits may apply, and what tier drugs are in. A committee of health care providers, like doctors and pharmacists, decide what will be included on your Formulary. This is called the Pharmacy and Therapeutics (P&T) Committee.

The P&T Committee looks at your Formulary regularly to make sure it is up to date. The P&T Committee met recently to update the Formulary. Please review the tables to see how the Formulary is changing.

There are no drugs that will be added to the Formulary effective April 1, 2026.

There are no drugs that will be removed from the Formulary effective April 1, 2026.

Drugs in this table have had a change in how they are covered. This could include a change in their Formulary tier and/or adding or removing a coverage limit. Details are below.

DRUG NAME	COVERAGE CHANGE
BREYNA	Step Therapy Added.
OCALIVA	Policy Archived due to market withdrawal.
REZDIFRA	Step Therapy Added.
TYSABRI	Step Therapy Updated.
VYNDAQEL	Removed from policy due to market withdrawal.

Please talk to your provider or pharmacist about these changes. They can help you get a new prescription if needed. A new prescription may or may not be the best choice for you. If not, you or your provider can request an exception. You can find the [Member Exception Request for Non-Formulary Medication form](#) on [CareSource.com](#). Your provider can also submit a request electronically or by faxing it to 866-930-0019.

If you or your provider have questions, please contact Member Services at the number on your ID card.

Sincerely,

CareSource Marketplace

You and your provider can find the full Formulary and other information on the Drug Formulary page on [CareSource.com](#).
