

Network Notification

Notice Date: May 14, 2020
To: Marketplace Providers
From: CareSource
Subject: Risk Adjustment Coding Education

Summary

CareSource reviews provider documentation to ensure the accuracy of diagnosis codes reported. Recent reviews have demonstrated an opportunity to improve the accuracy of ICD-10 codes reported for services rendered in an office setting.

Impact

As a result of our reviews, CareSource has created two reference documents related to risk adjustment coding based on two diagnosis codes we have identified for improvement: myocardial infarction and stroke. Providers can access the [Myocardial Infarction Education Reference](#) and [Stroke Education Reference](#) to learn more about appropriate risk adjustment coding for these diagnoses.

Importance

Complete, specific and accurate coding helps to ensure that CareSource is able to connect members with appropriate disease management and case management resources.
