

Network Notification

Notice Date: January 25, 2019
To: Ohio Health Partners
From: CareSource®
Subject: Hepatitis A Vaccination Recommendation

The Butler County Health District, City of Hamilton Health Department, and City of Middletown Health Department would like to take this opportunity to discuss Hepatitis A vaccination recommendations.

As of Oct. 22, 2018, we have had 127 cases linked to a statewide outbreak. In the past 5 years, we have averaged 1 case/year.

Hepatitis A is a vaccine-preventable illness and vaccinating high risk individuals or those who have contact with high risk individuals is one way we can stop this outbreak.

As a health care provider, please assist us in this outbreak by stocking and offering each and every patient a vaccination for hepatitis A if they fit one of the high risk groups listed above.

Thank you,

CareSource
