Lipid Testing in Assessing Cardiovascular (CV) Risk – OH MCD MM-0012	MEDICAL	NOVEMBER 1, 2018	MEDICAID	Cardiovascular disease (CVD) is one of the leading causes of morbidity and mortality in the United States. Approximately 630,000 people die from heart disease each year. Vascular disease is the major contributor to CVD events. Risk factors include: age, race, gender, family history of heart disease, high blood pressure, diabetes and prediabetes, elevated LDL, decreased HDL, chronic kidney disease, overweight and obesity, smoking, substance abuse, lack of physical activity, unhealthy diet and stress. Heart disease risks increase with age, and men have a higher risk than pre-menopausal women. However, the risk for women increases and becomes closer to the risk for men after menopause. Additionally, specific racial groups, including African Americans, Mexican Americans, American Indians, Hawaiians and some Asian Americans, are at a higher risk.
Transcranial Magnetic Stimulation – OH MCD MM-0233	MEDICAL	NOVEMBER 1, 2018	MEDICAID	CareSource has developed a new medical policy for transcranial magnetic stimulation that allows for approval for patients with severe depressive disorder. CareSource requires that authorization be obtained based on the criteria that is outlined in the medical policy. At this time, CareSource will only approve this procedure for patients with treatment resistant severe depressive disorder along with the additional criteria needing to be met that are outlined in the medical policy.
