**Important Points to Remember**

More than 22 million Americans have asthma. With an estimated 6 million children in the United States diagnosed with this disease, asthma is one of the most common chronic diseases of childhood. The National Heart, Lung and Blood Institute Clinical Practice Guidelines provide recommendations for the diagnosis and management of asthma.

CareSource is continuously working to educate our members with asthma on the importance of self-management, medication compliance and smoking cessation. Here are some key clinical activities for the diagnosis and management of asthma.

**Diagnosis**

- Establish asthma diagnosis using medical history and physical examination.
- Use of spirometry in patients ≥ to five years of age to establish reversibility of airway obstruction.
- Consider alternative causes of airway obstruction.

**Long-term Management**

**Goal for therapy is to control asthma**

- Reduce impairment and prevent chronic symptoms. Require infrequent use of short-acting beta2-agonist (SABA) (less than or equal to twice a week) and maintain normal or near normal lung function and normal activity levels.
- Reduce risk of exacerbations and minimize need for emergency room care or hospitalization.
- Prevent loss of lung function, and for children, prevent reduced lung growth and have minimal or no adverse effects of therapy.
- Review indications and adherence for long-term control therapy.

 COMPONENTS OF CARE:

1. Assessment and Monitoring
   - Assess asthma severity to initiate therapy.
   - Identify episodic signs and symptoms.
   - Assess response to medication and asthma control to monitor and adjust therapy.
   - Schedule follow-up care.

2. Education
   - With patient, develop self-management plan and ensure understanding.
   - Develop a written asthma action plan for patient, parent/caregiver and school.
   - Educate patient on taking prescribed medications correctly.
   - Integrate education into all points of care.

3. Control Environmental Factors and Co-Morbid Conditions
   - Recommend measures to control exposures to allergens and pollutants or irritants that make asthma worse (triggers).
   - Advise smoking cessation and eliminate exposure to secondhand smoke.
   - Treat co-morbid conditions and develop a self-management plan.

4. Medications
   - Select medication therapy and delivery devices to meet patients’ needs and circumstances (use stepwise approach). Inhaled corticosteroids are the most effective long-term control therapy for asthma that is not well-controlled.
   - Ensure patient is knowledgeable of the importance of medication adherence
   - Incorporate written asthma action plan

5. Home Management
   - Incorporate assessment and monitoring, patient education, environmental control and medication adherence
   - Ensure patient is knowledgeable of the importance of medication adherence
   - Incorporate written asthma action plan

METRIC INFORMATION
Patient demographic includes patients five to 85 years of age who are identified as having persistent asthma. To be considered compliant, asthmatics patients must show evidence of:

- Having a ratio of controller medications to total asthma medications of ≥0.50 during treatment period
- Patient remained on asthma controller medication for at least 75 percent of treatment period

POPULATION MANAGEMENT CAN BE EASY!
Our online Provider Portal allows you to easily and securely access critical information 24/7. CareSource offers its providers a comprehensive suite of informational online tools that can help increase efficiency and improve patient outcomes. Some of these tools include:

Member Profile – With its comprehensive view of patient medical and pharmacy data, the Member Profile can help you determine an accurate diagnosis more efficiently and reduce duplicate services, as well as unnecessary diagnostic tests.

Clinical Practice Registry – This proactive online tool emphasizes preventive care by identifying and prioritizing health care screenings and tests. The primary benefit of the Registry is population management. You can quickly sort your CareSource membership into actionable groups.
