

Together we can help save a patient's life

We recognize the important role healthcare professionals play in our members' lives and are committed to offering resources to help integrate suicide prevention strategies into your practice.

We encourage you to complete suicide screenings at all visits. We ask that you assess Humana – CareSource®-covered patients using screenings and assessments, such as those identified below:

- 96127 — Brief emotional/behavioral assessment (e.g., depression inventory, attention-deficit/hyperactivity disorder [ADHD] scale) with scoring and documentation, per standardized instrument
- 96110 — Developmental screening (e.g., developmental milestone survey, speech and language delay screen) with scoring and documentation, per standardized instrument

When you complete an assessment, we request that you also add the Current Procedural Terminology (CPT) category II code 3085F suicide risk assessed with the appropriate diagnosis codes:

Code	Diagnosis
T14.91	Suicide attempt
X71-X83	Intentional self-harm
R45.851	Suicidal ideation
X60-X69	Poisoning self-harm/suicide
Z91.5	Personal history of self-harm /suicide attempt

Humana – CareSource reaches out to members identified as at-risk to engage them in one-on-one care management. You also can refer a member for care management by visiting our provider portal at caresource.com/ky.

We encourage physicians to provide safety planning and lethal-means restriction information to patients who are experiencing suicidal ideation. We also encourage you to then share your assessment with a patient's other treating physicians. Communication between behavioral health and primary care providers is key in keeping at-risk patients safe.

Please visit www.caresource.com/suicide-prevention-tool-kit for more information about screenings, assessments, safety interventions and therapies.

Thank you for playing a critical role in preventing suicide.
